

### **Relations Between Private Industry and the Schools**

The Governing Board recognizes that private industry is an important segment of the local community and that the district should seek the involvement and support of representatives from private industry. The participation of private industry in our schools can add to the district's commitment to prepare students for entry into the business community.

The Superintendent or designee shall establish procedures for maintaining partnerships between the schools and private industry. The major emphasis in such partnerships should be on the utilization of human resources, not on the donation of funds. Activities appropriate to these partnerships include career education, incentive and recognition programs, classroom assistance and tutoring, technical education, computer education and staff development.

The Superintendent or designee shall periodically report to the Board regarding relations between private industry and the schools.
